SCOPE OF SERVICE

A) STONE DIVISION

Lebami has since established and maintained a reputation for installing only the top quality natural stones and tiles while providing their clients with excellent and modified services in choosing the right stones and tiles for each venture. Accurate and timely delivery and installation is one of our excellence, because we recognize how important is punctuality for you, especially in major projects with particular deadline where customer requirements encounter design capability and the idea is then developed by a team of experts.

LEBMAI PROVIDES ITS CLIENTS AN ABSOLUTE SERVICE FROM PRE-CONSTRUCTION TO THE COMPLETION OF THE PROJECT.

Pre-Design Services and Consultancy includes engaging in discussions with the clients, architects and builders before preferences are made. We make sure that we give you only the best tips and advices in choosing the right kind of stone and tiles needed for a particular project.

Budgeting, Estimating and Bidding In Lebami, we do not merely rely on the quantities of stones and tiles and the price for each material, but we also take into consideration the individual aspects required for each project we are working on. We want to give our customers the assurance that we can handle the complete scope of the project.

Shop Drawings We always give our best to produce a very detailed and accurate layout of the project. We also provide descriptions for each material required for the implementation of the assignment.

LEBMAI PROVIDES ITS CLIENTS AN ABSOLUTE SERVICE FROM PRE-CONSTRUCTION TO THE COMPLETION OF THE PROJECT.

Calculations comprise all the possible means and ways to protect the clients from any property and personal damages. Our team will bring assurance to the customers that damages can be made impossible with careful calculations.

Stone Supply and Installation Our supplies came from both local and foreign firms with quarries located in Greece, Italy, Spain, Turkey, China and the Philippines. We guarantee the quality selection, delivery, schedules and importing of the required materials.

Installation We carefully choose each setter and we see to it that each of them are well-trained and experienced in this field. We also aim excellent results with the installation of each natural stone and tiles in building projects by careful supervision during the process.

Installers Our installers are well-trained and have more than 10 years of experience in stone and tiles installation. Most of them have experienced working in both small and large scale projects such as Doha down town project, sidra hospital etc

MARBLE & CERAMIC FLOORING SUPPLY AND FIXING HOME/MARBLE & CERAMIC FLOORING SUPPLY AND FIXING

Flooring is a permanent covering of a floor from variety of options available. Gulf Uno Sani Tiles Centre is a celebrated supplier of various forms of flooring supply and fixing. With the fast-paced lifestyle, more and more people are opting for low maintenance and high-class look floorings for their needs. The choice of materials is affected by factors such as cost, endurance, comfort and cleaning effort. Hard flooring is usually made with concrete or cement, ceramic tile, glass tiles, and natural stone products.

SUPPLIER

Gulf Uno Sani Tiles Centre specializes in the supply of various flooring options.

Ceramic tiles are made from clay which are then formed into tiles and burnt or fired to make it hard. Ceramic tiles are set on the beds of mastic or cement. The joints are then grouted. Some of the varieties of ceramic tiles are quarry tile, porcelain, terracotta.

Natural stones are cut into a variety of shapes, sizes and thicknesses. Stone flooring too uses a similar fixing method like the ceramic tile. Slate and marble are some of the popular stone flooring. Stone flooring requires polishing and sealing. The other commonly used stones are granite, marble, limestone, sandstone, quartzite, ceramic and porcelain, engineered marble and quartz flooring.

Concrete or cement finished floor is also used for its durability, look and feel. Concrete are much more stylish and versatile and can be fitted more than your sidewalk in your kitchen! Our fabricators can uniquely shape the floors making them look completely original.

Vinyl is low-cost. It is available in sheets or vinyl floor tile with tons of colour and pattern. The vinyl floorings are susceptible to abrasions, scratches, cuts, tears and staining. Proper cleaning needs care and patience. But due to its low-cost vinyl is in demand and is fine for any area or room.

Heavy Stone Flooring Tiling Contractors

Setting up new sites for the projects with flooring, leveling.

FIXING Gulf Uno Sani Tiles Centre specializes in the fixing of all kinds of flooring and wall cladding. Our specialized team of tilers are ever-willing to take on any kind of job, especially those that require special expertise. We offer complete flooring and wall cladding solutions.

Laying screed: Screed is a design construction for installing specified flooring. Screeds are made of mortar blended with cementitious binders or anhydrite binders.

Dry fixing: Dry fixing is a method of construction where individual floor tiles are laid on a bed of sand and gravel, and the design is held together by tightly compacted components. The benefit of dry-fixing is flexibility, and the ability to rearrange if there are any mistakes. When there is any gradual shifts and imperfections, you can easily fix the floorings. It's also slightly less expensive than the other.

Wet fixing: Wet-fixing is a method where stones/ tiles are laid on mortared surface. This is a permanent layout. For any mistakes, you have to tear down the flooring and create new. The wear and tear of the floors are less and can be sustained over a long-time period. A potential drawback is its cost due to the use of cement.

Glue fixing: Fixing wall tiles with glue is a new concept and has gone viral. The method is easy and less time consuming. There are variety of glues available in the market and we chose the best to fix your problem. These adhesives are water resistance so there is no fear of falling off tiles. Our masons are experienced in fixing internal and external floors & ceramic tiles on wall.

Mechanical fixing: This kind of fixing is recommended when the wall to be covered is 4 meters high or more. In mechanical fixing, the tiles are glued to the wall and in addition, each piece is anchored to it by steel clamps. A combination of adhesive and mechanical fixing results in more safety. Usually, the tiles have holes specifically created to fix the clamps, with no impact on the covering. You can consult a structural engineer on building movement control joints and on pin and bracket requirements.
